

PROCESS FLOW VISUAL

Visualize your business processes, including automatic variant computation and key metrics

Uncover hidden information in your process data with the Process Flow visual, empowering you to make informed decisions and take appropriate actions.

PRODUCT OVERVIEW

The Process Flow visual takes your **business process** data (tickets, tasks, events, activities, ...) in the form of an event log and displays it in a clear and understandable format. **Key metrics** such as the lead time and number of event occurrences are available out of the box and the **automatically computed variants** can easily be filtered to gain an even deeper insight.

HOW DOES IT WORK?

By analyzing existing processes, inefficiencies and optimization potentials can be identified. Process Flow Visual displays these processes, their developments and the chronological sequence of events, actions or activities in chronological order.

This visualization presents important key figures for the analysis of your processes. The menu allows users to adjust the style and function of the visualization to suit their analysis needs.

ADDITIONAL FEATURES

- Highlight the main path of your process with a automatic line width
- The duration between events is calculated and shown in an Info-Box
- Change the size and alignment of the events
- Supported platforms:
 - Power BI
 - Entire MicroStrategy platform (MircoStrategy Dossier/Library/Mobile)
