

Process Gantt visual

Visualize processes, data load, tasks, project phases and timelines with up to millisecond accuracy

The Process Gantt provides a clear representation of all process sequences, by displaying the start and end dates of each activity.

PRODUCT OVERVIEW

This visualization allows companies to assess their current processes and identify areas for improvement by analyzing existing workflows. It can display log data, company processes, tickets, tasks, project phases and schedules to monitor ongoing processes, showing the time and duration of each activity, making it easy to pinpoint potential bottlenecks.

HOW DOES IT WORK?

The visualization offers extensive formatting options and millisecond precision for tracking project schedules and task progress. The appearance of events can be customized and it supports hierarchical data structures, allowing the tasks to be organized under higher-level project phases or departments. It allows you to distinguish between past, currently running, and future events. So the Process Gantt chart enables a flexible and precise project management.

ADDITIONAL FEATURES

- Modern, intuitive design
- Grid for more structure
- Current timestamp to clearly display the current process status
- Legend for a better overview of the processes
- Extensive menu for customizing the visualization
- Interaction with other graphs
- Supported platforms:
 - Power BI
