

Process Gantt Visual

Visualize processes, tasks and timelines with millisecond accuracy

The Process Gantt turns your process, ticket, and project data into a clear timeline view, showing exactly when each step started, how long it ran, and what's still open — so bottlenecks are easy to spot.

How it works

Feed in your log data — tasks, tickets, or project phases — and Process Gantt lays it out on a precise, millisecond-accurate timeline. Hierarchies keep tasks grouped under their parent phase or department, and a live timestamp line shows exactly where “now” sits against your plan.

What's included

Core capabilities plus the details that show up once you're deep in analysis.

Flexible Data Model

Map any process to Parent Category, Category, and start/end timestamps — no fixed schema required.

NEW

Past / Active / Future

Each phase is colored by status automatically, so what's done, running, or still ahead is obvious.

Rich Tooltips

Attach extra attributes and metrics to any bar and surface them on hover for deeper context.

NEW

Per-Phase Styling

Fill color, border, and line width are all configurable independently for every phase type.

NEW

Flexible Axis

Switch between absolute and relative time, set your own end date, and control the value format.

Built for Structure

Grid lines, a legend, and a live timestamp keep large, hierarchical timelines easy to read.

Platform

Certified visual for Power BI

Availability

Free tier to get started, AppSource plans for growing teams, and a custom license for enterprise-scale deployments
