

POWER BI · FILTERING

Data Slicer Visual

Efficiently filter your data in Power BI reports

Manage large lists the fast way. Bulk-insert thousands of values, switch between text and interval filtering, and keep every page of your report in sync — without slowing your report down.

How it works

Paste or bulk-insert values from Excel or any list, and Data Slicer handles up to 30,000 entries per column. Choose Text box mode for categorical values or Interval mode for numeric and date ranges, then apply filters exactly the way your report needs.

What's included

Core capabilities plus the details that show up once you're deep in analysis.

Bulk Insert

Paste values straight from Excel or any list format — no manual entry, even at scale.

Two Operation Modes

Text box mode for categorical values, Interval mode for numeric and date ranges.

Flexible Apply Logic

Apply on exit or with a dedicated filter button, plus a Ctrl+Enter shortcut for fast filtering.

NEW

Entry Counter

See exactly how many entries are currently matched, right inside the slicer.

NEW

One-Click Reset

Clear an entire filter selection instantly with a dedicated reset button.

NEW

Built for Scale

Filters up to 30,000 items, stays in sync across report pages, and supports multilingual models.

Platform

Certified visual for Power BI

Availability

Free tier with limited concurrent entries, a 30-day trial via Microsoft, or a SCvation custom license
